

How to Get Involved

Your participation in NADP subcommittees is encouraged. Membership is open to individuals and institutions interested in any

aspect of atmospheric deposition monitoring or research stemming from NADP data. Be-

coming a member is as simple as attending a meeting. Subcommittees meet in the spring and fall. Issues are introduced and discussed, and decisions are made by majority vote, following parliamentary procedures. Subcommittee officers are elected and represent the subcommittees on the NADP Executive Committee.

Along with the fall subcommittee meetings, the NADP holds a symposium at which speakers address current scientific issues about atmospheric deposition and its effects on natural and cultural resources. The NADP Chair and Vice-Chair organize and run the symposium. You are encouraged to submit abstracts for oral and poster presentations. Dates and locations of upcoming meetings are on the back of this brochure.

Upcoming Meetings

WELCOME TO NADP

Spring Subcommittee Meetings

April 11-12, 2007
Burlington, Vermont

All subcommittees meet jointly and in separate sessions. New initiatives, critical reviews of network operations, and proposals for change often begin at these meetings.

2007 Annual Meeting & Scientific Symposium

September 10-13, 2007
Boulder, Colorado

Subcommittees meet prior to the symposium. Symposium presentations will address unresolved issues in estimating dry deposition. Other topics will include critical loads, arctic and alpine deposition, ecosystem impacts, and effects of global versus regional mercury and carbon dioxide emissions.

For more information, visit the NADP website:
<http://nadp.sws.uiuc.edu>

The NADP receives support from the U.S. Dept. of Ag. - Cooperative State Research, Education, and Extension Service under agreement 2002-39138-11964. Additional support is provided by other government agencies, universities, nongovernmental organizations, and State Ag. Experiment Stations (through National Research Support Project - 3). Any opinions or recommendations are the authors' and do not necessarily reflect any sponsor's views. The NADP Program Office is located at the Illinois State Water Survey, an affiliated agency of the University of Illinois and a Division of the Illinois Department of Natural Resources.

The National Atmospheric Deposition Program

... Join Us in Guiding the Program's Future

Welcome to NADP

The NADP serves science and education and supports informed decisions on air quality issues related to precipitation chemistry.

A “Grassroots” Beginning

The story is told that NADP had a “grassroots” beginning. In 1977, State Agricultural Experiment Station scientists initiated a program to address the problem of atmospheric deposition

and its effects on crops, rangelands, forests, surface waters, and other natural and cultural resources. They called this program the National Atmospheric Deposition Program, or NADP.

The NADP began as and continues to be a cooperative program with diverse

participation, including federal, state, local, and tribal agencies, universities, environmental organizations, and industry.

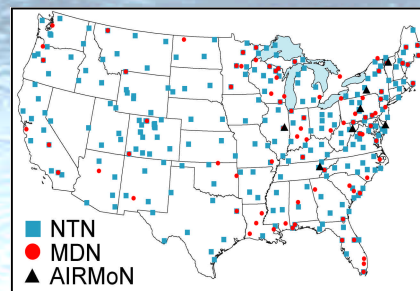

In 1978, the first NADP sites began collecting weekly precipitation samples. In the early 1980s, the National Acid Precitation Assessment Program was established and joined with NADP to sustain a long-term, quality-assured

precipitation monitoring network. The network underwent a major expansion. Today, the NADP National Trends Network (NTN) has more than 250 sites.

Responding to emerging issues, NADP added two networks in the 1990s: the Atmospheric Integrated Research Monitoring

Network (AIRMoN), which collects daily samples at seven sites, and the Mercury Deposition Network (MDN), which has nearly 100 sites, including eight sites in Canada. The NADP website contains data, maps, and Program information (<http://nadp.sws.uiuc.edu>).

Success by Committee

Much of NADP’s success can be attributed to the dedicated people who support the network: site operators who collect samples, sponsoring organizations that provide financial support, and data users who offer recommendations for improved data quality, delivery, and products. While Program Office staff coordinate network operations, committees guide the Program.

The Executive Committee provides program direction through the Technical and Budget Advisory Committees and Quality Assurance Advisory Group.

Most initiatives, projects, and recommendations for Program change are developed by three standing subcommittees that advise the Executive and Technical Committees.

The Network Operations Subcommittee oversees field-siting criteria and laboratory and sample collection protocols, and evaluates equipment and recordkeeping methods.

The Data Management and Analysis Subcommittee

guides data collection, storage, QA/QC, and, most importantly, web-based data presentations in tables, maps, and graphs.

The Ecological Response and Outreach Subcommittee provides input on data user needs, and initiates and

develops programs and products to promote the program and increase participation.
