

EXPLANATION

- 500— Line of equal thickness of rocks of early Eocene age. Interval 100 feet.
- — — Approximate updip limit of outcrop
- U / D — Fault—Vertical or nearly so
 U Upthrown side
 D Downthrown side
- Area of outcrop (or shallow subcrop)
- Area where strata of early Eocene age consist of clastic rocks
- Area where strata of early Eocene age consist of carbonate rocks
- Well control point

Thickness and lithology of rocks of early Eocene age.
