Live DEAD

REMARKS: Surveyed approx. 70 yds of stream above beach berm - ALL fish observed above beach berm.  
 Pinks were also observed upstream of the portion of stream walked. The upstream extent of migration/spawning is unknown. ~~This stream was~~ We submitted this stream for inclusion the Anadromous waters catalog.  
 In 1989 VECOP <sup>oil cleanup</sup> crews operated from Port Graham to Port Chatham (the stream is located between Port Graham and Port Chatham). An oil sample was collected by ADF4G personnel from Pt. Bede in 1989.

OVER →

In 1989 a work order which included this stream  
area was signed by the Inter-Agency  
Shoreline Cleanup committee and Exxon.  
The work order recommended cleanup of  
mousse patches and ~~logs~~ tarballs

TYPE A SHORELINE CLEANUP WORK ORDER

Date: 7/11/89 Shoreline Segment: Homer Zone Unit #15

Location: (Attach map) Dogfish Bay to English Bay

ADEC No. \_\_\_\_\_ Shoreline Assessment Date: \_\_\_\_\_

Recommended Cleanup Activity(ies):

Manual surficial cleanup of mousse patties and tarballs.

Priority Considerations:

None.

Ecological Constraints (from site survey):

None.

Archaeological Constraints:

If any archaeological or historical sites or artifacts are discovered during the cleanup activity, they must remain undisturbed and the Exxon archaeologist C. Mobley contacted (as per procedures in the "Guideline for Shoreline Cleanup") and the State historic Preservation Office notified as soon as possible.

Submitted by: David D. Rachel

Federal On-Scene Coordinator

**Homer Zone**

**Cleanup Management Unit: 15, Dogfish Bay to English Bay**

**General Description of Unit:** Exposed outer rocky shoreline composed of high cliffs with small gravel beaches in the many shoreline indentations. Small streams empty over falls or through shallow beaches along the shoreline of this unit.

**Critical Resources within the Unit:** Anadromous fish use some of the streams in this unit. Commercial and subsistence fishing occurs along shore in this area, especially near English Bay. A sea lion haulout is located on Flat Island. Residential and tourism uses are found in English Bay.

**Extent of Impact:** Very little oiling has been observed in this unit. Light and very light concentrations have been found in the small gravel beaches between Point Adam and Point Bede, and at English Bay. High wave energy conditions in this unit account for some localized movement of mousse balls in the area.
