Memo

Date: 4/24/90

To: John Bauer

Through: Dick Mckean

From: Russell Kunibe, EFOII

Subject: SSAT surveys from PD-2 and PD-3

SSAT team # 17 completed surveys of PD-2 on 4/20/90 and of PD-3 on 4/21/90. These segments both included important anadromous streams. In both segments there were mousse patties around the base of grass clumps. New shoots of grass were growing through these mousse patties. In a short time the mousse patties will be obscured by the new growth of grass and pick up of the mousse will be difficult. This area needs immediate attention.

To pick up just the mousse patties in the grass would take a crew of 6 two days. Perhaps Exxon could be persuaded to send a crew out by helicopter to pick up this oil and store it on the beach until the work crews arrive after May 15, 1990 to work the rest of these segments.

Please expedite the STAG process so that these segments receive immediate attention.

PWS, SEWARD AND HOMER ECOLOGICAL CONSTRAINTS

1A Salmon stream mouth - fry outmigration (3/1 to 5/15)
1B Salmon stream mouth - spawning (7/10 to 8/31)
No disturbance of stream bed or banks unless authorized by ADF&G. No beach flushing into stream drainage. No bioremediation or other chemical application within 100m of stream without authorization from ADF&G. No use of methods which might affect nearshore oil or toxicity levels, such as hot water wash or Inipol application, prior to at least July 1 unless authorized by ADF&G. Treatment which is not intrusive and which will not affect nearshore oil or toxicity levels, such as manual removal, can probably proceed without adherence to time constraints. In any case, contact ADF&G Habitat Division prior to treatment for consultation and/or permit application.
AGENCY CONTACT PERSON: ADF&G John Morison 267-2324

1C Salmon fry nursery area (4/31 to 7/31)
No use of methods which might affect nearshore oil or toxicity levels, such as hot water wash or Inipol application, prior to July 31 unless authorized by ADF&G. Treatment which will not affect nearshore oil or toxicity levels, such as manual or mechanical removal, can probably proceed without adherence to time constraints. Contact ADF&G prior to treatment for confirmation and advice.
AGENCY CONTACT PERSON: ADF&G Larry Peltz 424-3214

5R Seabird colony (5/1 to 9/1)
Restrict air and boat traffic to essential minimum. No personnel within 800m. Aircraft to maintain 800m horizontal, 300m vertical distance from colony. Contact USFWS prior to treatment.
AGENCY CONTACT PERSON: USFWS Jill Parker 786-3377

5S Shorebird/waterfowl concentration (4/1 to 5/15)
Restrict all activity to essential minimum, especially air traffic. Contact USFWS and ADF&G for confirmation.
AGENCY CONTACT PERSON: USFWS Jill Parker 786-3377
ADF&G Tom Rothy 267-2206

5T All Bald Eagle nests (3/1 to 6/1)
Active Bald Eagle nests (3/1 to 9/1)
Restrict air traffic and all disturbance to essential minimum. No personnel within 400m 3/1 to 6/1. Air approach and takeoff from and to seaward only; maintain 800m horizontal, 300m vertical distance from nests. Contact USFWS prior to treatment for confirmation of dates.
AGENCY CONTACT PERSON: USFWS Jill Parker 786-3377

6U Recreation: Tent sites (6/1 to 9/15)
6V Anchorages (6/1 to 9/15)
6W Forest Service cabins (6/1 to 9/15)
6X Lodge (6/1 to 9/15)
6Y Special use destination

7 Subsistence area: Salmon harvesting (5/1 to 9/30)
Finfish harvesting
Deer harvesting (8/15 to 2/28)
7JJ Invertebrate harvesting
Contact ADF&G and appropriate Native Corporation for specific dates, locations, and constraints. Restrict boat and air traffic and beach disturbance to essential minimum. If plans for treatment include methods such as hot water wash or application of Inipol which might affect intertidal or nearshore oil or toxicity levels, contact ADF&G and appropriate Native Corporation for authorization - see Native Corporation Contact List for each Native Corporation's contact person.
AGENCY CONTACT PERSON: ADF&G Jim Fall 267-2359

Memo

Date: 4/24/90

To: John Bauer

Through: Dick Mckean

From: Russell Kunibe, EFOII

Subject: SSAT surveys from PD-2 and PD-3

SSAT team # 17 completed surveys of PD-2 on 4/20/90 and of PD-3 on 4/21/90. These segments both included important anadromous streams. In both segments there were mousse patties around the base of grass clumps. New shoots of grass were growing through these mousse patties. In a short time the mousse patties will be obscured by the new growth of grass and pick up of the mousse will be difficult. This area needs immediate attention.

To pick up just the mousse patties in the grass would take a crew of 6 two days. Perhaps Exxon could be persuaded to send a crew out by helicopter to pick up this oil and store it on the beach until the work crews arrive after May 15, 1990 to work the rest of these segments.

Please expedite the STAG process so that these segments receive immediate attention.

☐ NO TREATMENT RECOMMENDED ☒ TREATMENT SUGGESTED
COMMENTS

Recommend Manual pickup and removal of patties found ~~distrib~~ distributed amongst the grass flats - as well as the patties found on the north shore (see Attached maps).

Rapid rate of vegetation growth requires that oil be picked up as soon as possible — now!

Priority Cleanup AREA - ADF&G (Doug Hill)

COMMENTS: Recommendation: Preferable to get a crew into this Area "As Soon As Possible" due to the growth of vegetation which will, in a short period of time, greatly impair locating the numerous tarballs and patties - many of which are already becoming concealed by grass and beach greens - Oil found

Like the AREA 4 ed NOW!

PD-003 46 PHOTOLOG Port Dick Creek 6/21

242-~~42~~42-10460 Homer Zone

FRAME(S) DESCRIPTION

46 OIL DISTRIBUTION DIAGRAM

Would also like to stress the preference to remove the oil in PD 001, 002, and 004 which poses a potential threat to this system - this oil is oriented such that it could possible be washed into Pt. Dick Crk

A portion of PD-001 was treated with Inipol (a large Asphalt mat - which we would like removed ASAP).

- MANUAL Pick up and removal is recommended.
- Port Dick Creek is ~~Salt~~ Coho, Chum and Pink Salmon Stream. Numerous Chum fry were observed on recent surveys. Pink fry found dead on banks of stream on 4/29/90 (Approx. 30).
- This stream is also used by migratory waterfowl
- Mussel beds are present at the mid to lower intertidal portion of this Stream.
- BALD Eagles frequent Pt. Dick Creek.

I agree with recommendations. Michael H Faure

ACE 10493812 ACE 1940615

- AN ADF&G observer ~~should~~ will be present during the cleanup operation

= Sample taken
= Photo frame # and shot direction.

COMMENTS:

ACE 10493813

THE ONLY TREATMENT RECOMMENDED FOR THIS STREAM IS THE MANUAL REMOVAL OF SCATTERED TAR PATTIES AS INDICATED ON THE ATTACHED MAP. IT IS RECOMMENDED THAT THE WORK ON THIS STREAM BE DONE AS SOON AS POSSIBLE BECAUSE A LARGE PERCENTAGE OF THE TAR PATTIES ARE LOCATED WITHIN RAPIDLY GROWING VEGETATION.

ACE 10493817 ACE 1940620

Segment PD 003
Stream No. 242-42-10460
Ecological summary

4/29/90
Michael Fawcett

This large braided stream has an intertidal portion nearly 1 km long, consisting of mobile gravel/pebble sediments. A few grassy patches occur along the edges of the floodplain. The banks of the floodplain consist mostly of boulders, cobble, and pebbles. Little or no attached marine biota occurs beyond 200 m upstream from the ADF&G cabin. Below the cabin there are extensive beds of Fucus, mussels, and clams similar to those in the adjacent segment PD 002. Remaining oil consists of sporadic small tar mats and bits of pavement along the north bank, mostly upstream from the cabin. Manual removal is recommended. There are no ecological constraints re: inter biota.

ACE 10493818 - 15

Pink and chum salmon fry were found swim in small side channels, and a number of dea fry of both species were found stranded in a gra area and on a pebble bank. These appeare to have died after being stranded by the rece tide.

COMMENTS:
~~CHUM FRY PRESENT~~. SURVEYED THE ENTIRE SEGMENT. NOTING OIL PATTIES SCATTERED IN THE GRASS FLATS AND ON THE GRAVEL PORTION OF THE FLATS. I GAVE THE OG THE MAP I HAD IN ORDER TO SPEED THINGS UP. CHUM FRY OBSERVED IN SLOUGH THAT RUNS THROUGH GRASS COVERED BAR. AREA NEEDS TO BE CLEANED ASAP, BEFORE THE RAPID VEGETATION GROWTH CONCEALS THE OIL PRESENT. GUS GARCIA (EXXON) AGREES. ONLY TWO SURVEYS WERE COMPLETED TODAY. UPON RETURNING TO HOMER GUS GARCIA (EXXON), WILLIAM REID (OG), MIKE FAUCETT AND I MET TO COMPLETE SURVEY WRITE-UPS. WE ALSO DISCUSSED THE POSSIBILITY USING ALREADY COMPLETED ADF&G SURVEYS/MAPS AND SSAT INFO IN LIEU OF REPEATING STREAM SURVEYS WHICH HAVE ALREADY BEEN COMPLETED. THE SSAT TEAM SURVEYED ALL ANAD STREAMS EXCEPT BLACK LAGOON AND THE LAGOON OF CHUGACH BAY CREEK. ADF&G HAS THOROUGHLY SURVEYED ALL ANADSTREAMS AND ADDED OIL LOCATIONS TO SSAT MAPS WHERE INFO MISSING. IF DARYL YOES (EXXON) ACCEPTS EXISTING ADF&G INFO AND LEE GLENN AND I ACCEPT THE SSAT INFO. WE WILL NOT REPEAT WHAT HAS ALREADY BEEN DONE. GUS GARCIA (EXXON) AND THE OTHER ANADSCAT MEMBERS ARE CONFIDENT THAT HOMER OSRC/ADF&G INFO IS FAIR AND CORRECT. LEE SPOKE WITH DARYL AND TOMORROW WE WILL SIGN EACH OTHER OFF AND THE ANADSCAT TEAM WILL CONTINUE ON TO KODIAK. STREAMS NOT SURVEYED BY THE ANADSCAT TEAM WERE DRY LABLED. EXXON ACCEPTED LEE'S AND MY TREATMENT RECOMMENDATIONS. (ACCEPTED ON PAPER - WE'LL SEE WHAT HAPPENS ON THE BEACH).

LABBED.

Chum fry observed in slough that runs through grass covered area. Area needs to be cleaned ASAP, before the rapid vegetation growth conceals the oil present → EXXON/(Gus Garcia) agrees. Only two over

45 PHOTOLOG

FRAME(S)	DESCRIPTION

46 OIL DISTRIBUTION DIAGRAM

Surveys were completed today.

Upon returning to Homer Gus Garcia (EXXON), William Reid (OG), Mike Faucett & I (Doug Hill) met to complete survey write ups. We also discussed the possibility using already completed AOF&G surveys/maps and SSAT info in lieu of repeating stream surveys which have already been completed. The SSAT team surveyed all ANAD streams except Black Lagoon & the lagoon of Chugach Bay creek. AOF&G has thoroughly surveyed all ANAD streams & added oil locations to SSAT maps where info missing. If Daryl Yoes (EXXON) accepts existing AOF&G info & Lee Clinkenbeard (AOF&G) accept the SSAT info. We will not repeat what's already been done.

Gus Garcia (EXXON) & the other ANAOSCAT members are confident that Homer OSRL/AOF&G info is fair & correct.

Lee spoke w/Daryl and tomorrow we'll sign each other off & the ANAOscat team will continue on to Kodiak.

Streams not surveyed by the ANAOSCAT team were dry (abbd. EXXON accepted Lee's & my treatment recommendations. (ACCEPTED ON PAPER - we'll see what happens on the beach).

Priority Cleanup AREA - ADF&G (Doug Hill)

COMMENTS: Recommendation: Preferable to get a crew into this Area "As Soon As Possible" due to the growth of vegetation which will, in a short period of time, greatly impair locating the numerous tarballs and patties - many of which are already becoming concealed by grass and beach greens - Oil found on stream banks and throughout the grass flats (light oiling). OVER

Would like this Area cleaned NOW!

PD-003

45 PHOTOLOG Port Dick Creek

242-~~42~~42-10460 Homer Zone

FRAME(S) DESCRIPTION

46 OIL DISTRIBUTION DIAGRAM

Would also like to stress the preference to remove the oil in PD 001, 002, and 004 which poses a potential threat to this system - this oil is oriented such that it could possible be washed into Pt. Dick Crk. A portion of PD-001 was treated with Inipol (a large Asphalt mat - which we would like removed ASAP).

- MANUAL Pick up and removal is recommended.
- Port Dick Creek is ~~salta~~ → Coho Chum and Pink Salmon stream. Numerous chum fry ~~were~~ observed on recent surveys. Pink fry found dead on banks of stream on 4/29/90 (Approx. 30).
- This stream is also used by migratory waterfowl
- Mussel beds are present at the mid to lower intertidal portion of this stream.
- BALD Eagles frequent Pt. Dick Creek.

I agree with recommendations. Michael H Faure

ACE 10493824 - 15 ACE 1940626

- AN ADF&G observer will ~~should~~ be present during the cleanup operation

Chum fry present

COMMENTS: Surveyed the entire segment. Noting oil patties scattered in the grass flats & on the gravel portion of the flats. I gave the OC the map & I had to in order to speed things up.

Chum fry observed in slough that runs through grass covered bar. Area needs to be cleaned ASAP, before the rapid vegetation growth conceals the oil present → EXXON (Gus GARCIA) agrees. Only two oils

46 PHOTOLOG

FRAME(S)	DESCRIPTION

46 OIL DISTRIBUTION DIAGRAM

Surveys were completed today.

Upon returning to Homer Gus Garcia (Exxon), William Reid (OG), Mike Fawcett & I (Doug Hill) met to complete survey write ups. We also discussed the possibility using Already completed AOF&G surveys/maps and SSAT info in Lieu of repeating stream surveys which have already been completed. The SSAT team surveyed all ANAS streams except Black Lagoon & the lagoon of Chugach Bay creek. AOF&G has thoroughly surveyed all ANAO streams & added oil locations to SSAT maps where info missing. If Daryl Does (Exxon) accepts existing ADF&G info & Lee Glenn & I (ADF&G) accept the SSAT info. We will not repeat what's already been done.

Gus Garcia (Exxon) & the other ANAOSCAT members are confident that Homer OSRL/AOF&G info is fair & correct.

Lee spoke w/ Daryl and tomorrow we'll sign each other's OH & the ANAOscat team will continue on to Kodiak.

Streams not surveyed by the ANAOSCAT team were dry labbed. Exxon accepted Lee's & my treatment recommendations. (ACCEPTED ON PAPER - we'll see what happens on the beach).

ACE 10493831 ACE 1940639

Segment PD 003 4/29/90
Stream No. 242-42-10460 Michael Fawcett
Ecological summary

This large braided stream has an intertidal portion nearly 1 km long, consisting of mobile gravel / pebble sediments. A few grassy patches occur along the edges of the floodplain. The banks of the floodplain consist mostly of boulders, cobble, and pebbles. Little or no attached marine biota occurs beyond 200 m upstream from the ADF&G cabin. Below the cabin there are extensive beds of Fucus, mussels, and clams similar to those in the adjacent segment PD 002. Remaining oil consists of sporadic small tar mats and bits of pavement along the north bank, mostly upstream from the cabin. Manual removal is recommended. There are no ecological constraints re: intertidal biota.

ACE 10493832

Pink and chum salmon fry were found swimming in small side channels, and a number of dead fry of both species were found stranded in a grassy area and on a pebble bank. These appeared to have died after being stranded by the receding tide.

ANADROMOUS FISH STREAM EVALUATION

SEGMENT ST/PD-003 STREAM NO: 242-42-10460 DATE 4/29/90

SEGMENT ENVIRONMENTAL SENSITIVITIES AND TIME CONSTRAINTS:

1A	Salmon stream mouth - fry outmigration (3/1 to 5/15)	
1B	Salmon stream mouth - spawning (7/10 to 8/31)	
1J	Purse seine area (7/20 to 9/30)	
4GA	State Marine Park Alaska State Wilderness Park	
6U	Recreation:	Tent sites (6/1 to 9/15)
6W	Recreation:	Forest Service cabins (6/1 to 9/15)
6Y	Recreation:	Special use destination
6NN	Recreation:	Sportfishing
8AA	Sensitive estuary	

See attached Ecological Constraint sheet for specific constraints and contacts.

SUBDIVISION ECOLOGICAL CONSTRAINTS:

Subject stream is located within subdivision A (1 of 1). No additional ecological constraints.

ARCHAEOLOGICAL CONSTRAINTS:

If treatment is planned, a cultural resource evaluation is required prior to shoreline treatment.

SHPO SIGNATURE: Rachel Mennen DATE: 5/22/90

Subsurface Oil Observed: Yes____ No X Maximum Depth____

RECOMMENDATIONS:

____No Treatment Recommended	____Snare/Absorbent Booms
____Treatment Recommended	____Oil Snares (pom poms)
X Manual Pickup	____Absorbents (pads,rolls,etc)
____Bioremediation	____Spot Washing:____Wands
____Tarmat Removal	____Beach Cleaner
	____Other (see comments)

COMMENTS: Recommend manual pick up of patties. Work should be scheduled in conjunction with work in PD 002, 5/16 to 7/1.

ADDENDUM: SUBDIVISION CONSTRAINTS

SEGMENT PD-4 SUBDIVISION A (1 of 1)

WORK WINDOW	
Manual Pickup Tarmat Removal	OPEN
Bioremediation and Spot Washing Less Than 100m From Stream	WORK PRIOR TO 6/25 (ADF&G MONITOR REQ.)
Bioremediation and Spot Washing More Than 100m From Stream	WORK PRIOR TO 6/25

ARCHAEOLOGICAL STANDARD CONSTRAINT

If cultural resources are uncovered, PHONE 564-3274.

APPLICABLE ECOLOGICAL TIME CONSTRAINTS

1A,1B	Salmon Stream	ADF&G catalogued anadromous stream (242-42-10460) is in Subdivision A. This subdivision is closed to bioremediation and spot washing less than 100m from stream 7/10 to 8/31. Before 7/10, bioremediation and spot washing are permitted less than 100m from stream with on-site ADF&G monitor or ADEC alternate present. No constraint to bioremediation and spot washing more than 100m from stream. No constraint to manual pickup and tarmat removal.
1J	Purse Seine Area	Closed to bioremediation after 6/25.
5T	Bald Eagle Nest	NO CONSTRAINT. USFWS 6/1/90 map indicates no active nest within 400m of Subdivision A work site.

OTHER ECOLOGICAL CONSIDERATIONS

No disturbance to stream bed or banks. Restrict boat and air traffic to essential minimum after 6/25. No flushing of pollutants or sediments into stream drainage; do not allow inipol to enter stream flow. On-site examination and consultation by ADF&G monitor is required prior to bioremediation and spot washing in order to authorize a setback distance from the stream during chemical application; if ADF&G monitor's presence is impossible, authorization may be given by the ADEC monitor. Avoid any unnecessary disturbance or damage to unoiled biota and substrate.

PWS, SEWARD AND HOMER ECOLOGICAL CONSTRAINTS

1A Salmon stream mouth - fry outmigration (3/1 to 5/15)
1B Salmon stream mouth - spawning (7/10 to 8/31)
No disturbance of stream bed or banks unless authorized by ADF&G. No beach flushing into stream drainage. No bioremediation or other chemical application within 100m of stream without authorization from ADF&G. No use of methods which might affect nearshore oil or toxicity levels, such as hot water wash or Inipol application, prior to at least July 1 unless authorized by ADF&G. Treatment which is not intrusive and which will not affect nearshore oil or toxicity levels, such as manual removal, can probably proceed without adherence to time constraints. In any case, contact ADF&G Habitat Division prior to treatment for consultation and/or permit application.
AGENCY CONTACT PERSON: ADF&G John Morison 267-2324

1C Salmon fry nursery area (4/31 to 7/31)
No use of methods which might affect nearshore oil or toxicity levels, such as hot water wash or Inipol application, prior to July 31 unless authorized by ADF&G. Treatment which will not affect nearshore oil or toxicity levels, such as manual or mechanical removal, can probably proceed without adherence to time constraints. Contact ADF&G prior to treatment for confirmation and advice.
AGENCY CONTACT PERSON: ADF&G Larry Peltz 424-3214

1D Esther Hatchery release (4/15 to 6/15)
1E Main Bay Hatchery release (4/20 to 6/15)
1F Sawmill Bay Hatchery release (4/15 to 6/1)
1G Cannery Creek Hatchery release (4/21 to 6/1)
1H Remote release site
No use of methods which might affect nearshore oil or toxicity levels, such as hot water wash or Inipol application, prior to at least July 1 unless authorized by ADF&G and/or PWS Aquaculture Association. Treatment which will not affect nearshore oil or toxicity levels, such as manual or mechanical removal, can probably proceed without adherence to time constraints. Contact ADF&G or PWS Aquaculture Association for confirmation and authorization.
AGENCY CONTACT PERSON: 1E ADF&G Larry Peltz 424-3214
1D 1F 1G PWS Aquaculture Association John McMillan or Bruce Suzomoto 424-7511

1I Gill net area (6/7 to 8/31)
1J Purse seine area (7/20 to 9/30)
1K Purse seine hook-off (7/20 to 9/30)
1L Set net sites (6/11 to 7/25)
Contact ADF&G for specific dates, locations and constraints. Restrict boat and air traffic to essential minimum. When set net sites are present (1L) restrict beach operations to essential minimum as authorized by ADF&G. If plans for treatment include methods such as hot water wash or Inipol application which might affect nearshore oil or toxicity levels, contact ADF&G for consultation and authorization.
AGENCY CONTACT PERSON: ADF&G James Brady 424-3212

2M Herring spawning (4/1 to 6/15)
Contact ADF&G for confirmation - dates and locations may vary. Restrict boat traffic to essential minimum. Avoid damage to unoiled intertidal and subtidal algae and seagrass. If plans for treatment include methods such as hot water wash or Inipol application which might affect nearshore oil or toxicity levels, contact ADF&G for consultation and authorization.
AGENCY CONTACT PERSON: ADF&G Evelyn Biggs 424-3235

3N, 3P Harbor seal and sea lion pupping (5/15 to 7/1)
3O, 3Q Harbor seal and sea lion molting (8/15 to 9/15)
Restrict boat and air traffic to essential minimum. No personnel within 400m. Aircraft to maintain 800m horizontal and 300m vertical distance from haulouts. No application of Inipol within two weeks of arrival dates (work window at these sites is limited to 7/2 to 7/31). Contact ADF&G and USFWS prior to treatment for confirmation.
AGENCY CONTACT PERSON: US National Marine Fisheries Service Steve Zimmerman 586-7235
ADF&G Don Calkins 267-2403

5R Seabird colony (5/1 to 9/1)
Restrict air and boat traffic to essential minimum. No personnel within 800m. Aircraft to maintain 800m horizontal, 300m vertical distance from colony. Contact USFWS prior to treatment.
AGENCY CONTACT PERSON: USFWS Jill Parker 786-3377

5S Shorebird/waterfowl concentration (4/1 to 5/15)
Restrict all activity to essential minimum, especially air traffic. Contact USFWS and ADF&G for confirmation.
AGENCY CONTACT PERSON: USFWS Jill Parker 786-3377
ADF&G Tom Rothy 267-2206

5T All Bald Eagle nests (3/1 to 6/1)
Active Bald Eagle nests (3/1 to 9/1)
Restrict air traffic and all disturbance to essential minimum. No personnel within 400m 3/1 to 6/1. Air approach and takeoff from and to seaward only; maintain 800m horizontal, 300m vertical distance from nests. Contact USFWS prior to treatment for confirmation of dates.
AGENCY CONTACT PERSON: USFWS Jill Parker 786-3377

5U Recreation: Tent sites (6/1 to 9/15)
5V Anchorages (6/1 to 9/15)
5W Forest Service cabins (6/1 to 9/15)
5X Lodge (6/1 to 9/15)
5Y Special use destination

7Z Subsistence area: Salmon harvesting (5/1 to 9/30)
Finfish harvesting
Deer harvesting (8/15 to 2/28)
Invertebrate harvesting
Contact ADF&G and appropriate Native Corporation for specific dates, locations, and constraints. Restrict boat and air traffic and beach disturbance to essential minimum. If plans for treatment include methods such as hot water wash or application of Inipol which might affect intertidal or nearshore oil or toxicity levels, contact ADF&G and appropriate Native Corporation for authorization - see Native Corporation Contact List for each Native Corporation's contact person.

Priority Cleanup AREA - ADF&G (Doug Hill)

COMMENTS: Recommendations: Preferable to get a crew into this Area "As Soon As Possible" due to the growth of vegetation which will, in a short period of time, greatly impair locating the numerous tarballs and patties, many of which are already becoming concealed by grass and beach greens. Oil found

Would like this AREA 4 Priority Cleaned NOW!

PD-003 — 48 PHOTOLOG — Port Dick Creek Homer Zone

242-~~42~~42-10460
FRAME(S) — DESCRIPTION

48 OIL DISTRIBUTION DIAGRAM

Would also like to stress the preference to remove the oil in PD 001, 002, and 004 which poses a potential threat to this system - this oil is oriented such that it could possible be washed into Pt. Dick Cr. A portion of PD-001 was treated with Inipol (a large Asphalt mat - which we would like removed ASAP).

- MANUAL Pick up and removal is recommended
- Port Dick Creek is ~~Falls~~ Coho, Chum and Pink salm. Stream. Numerous chum fry were observed on recent surveys. Pink fry found dead on banks of stream on 4/29/90 (Approx. 30).
- This stream is also used by migratory waterfo.
- Mussel beds are present at the mid to low intertidal portion of this Stream

ACE 10493851

- BALD Eagles frequent Pt. Dick Creek.

I agree with recommendations. Michael H Faure

ACE 1940280

- AN ADF&G observer will ~~should~~ be present during the cleanup operation

- Sample taken
- Photo frame # and shot direction.

ADEC DEMOBILIZATION REPORT
FOR PHYSICAL/MECHCANICAL TREATMENT AND CUSTOMBLEN

To: Alaska Department of Environmental Conservation
Oil Spill Response Center
Anchorage, Alaska
Attn: John Bauer
FAX 265-4666, 265-4656

RE: SEGMENT NUMBER PD-03 SUBSEGMENT NUMBER A

DEC REP STEPHEN FERGOSON USCG REP RANDOLPH HUBBARD

EXXON REP JON CZARENSKI BOAT NAME/SQUAD NUMBER ENSCO ATLAS/4

Has work been completed as stated on the work order? If your answer is no please explain in detail how the work performed was different from the work order language.

YES

Is there additional oil remaining which can be removed with further physical/mechanical treatment? If yes what is the recommended treatment method.

THERE ARE REMAINING MOUSSE BALLS / NOT VERY FEASIBLE FOR REMOVAL DUE TO BEING SPREAD OUT OVER A VERY LARGE AREA SO ANSWER IS NO

Describe the amount of oil remaining (type, size of area and location).

- MOUSSE BALLS => LEECHED INTO SEDIMENTS FOUND SPORADICALLY IN EEL GRASS AREAS

Additional Comments (keep objective)

COMMENTS

PROBLEMS: ENFORCEMENT ACTIVITIES, UPLAND CONT., ETC.
(PLEASE NOTE IF PROBLEM WAS DISCUSSED WITH PROPER AUTHORITY, AND SUBSEQUENT RESPONSE.)

NO PROBLEMS

(1) NO PROBLEM WITH CLEAN-UP (ADF+G) NOTED NO WORK WAS DONE IN STREAM AND VERY CAREFUL IN WORKING STREAM BANK

(2) CLEAN-UP CREW WAS NOT ALLOWED IN ARCH. AREA ⇒ MONITORED VERY closely BY R. MACCHARCH (ADNR)

OBSERVATIONS: TREATMENT EFFICIENCY, POSSIBLE IMPROVEMENTS, ETC.

(1) TAR PATTIES + TAR BALLS WHICH HAD LEECHED INTO SEDIMENTS IN AREAS WHERE EEL GRASSES WERE FOUND.

(2) CLEAN-UP CREW WORKED THIS AREA IN A GRID LIKE SYSTEM BY WORKING UP AND DOWN THE PORT DICK. CREEK STREAM BANKS

(3) LEE GLEN (ADF+G), RANDOLPH HUBBARD (USCG) AND I WALKED AREA AFTER CREW (CLEAN-UP) HAD RUN GRID LIKE SYSTEM ⇒ FOUND "TRACE" OILING A FEW MOUSSE-BALLS WHICH HAD LEECHED INTO SEDIMENTS

SEGMENT AS / PD-03 SUBDIVISION: A SITE: 01 DATE 05 Aug 1990

ISCG
NAME AEC Vandepels SIGNATURE AEC Vandepels

☐ YES ☒ NO PRIORITY SITE FOR REASSESSMENT IN 1991
REASON:
Found a few patties, picked them up. No more work or reassessment required.

ADEC
NAME Clara S. Crosby SIGNATURE Clara S. Crosby.

☒ YES ☐ NO PRIORITY SITE FOR REASSESSMENT IN 1991
REASON: The reason for this segment to be made a priority site is. ~~name~~ because; the oiling previously noted was in grass & vegetation & AT THIS TIME. A THOROUGH SURVEY COULD NOT BE CONDUCTED of THOSE AREAS; Also - if recoverable oil is found within this AREA IT WILL HAVE TO BE DONE BEFORE GRASS & Vegetation covers it AGAIN.
ANADROMOUS STREAM —

LAND MANAGER
NAME David K. Kenagy ADNR SIGNATURE

☒ YES ☐ NO PRIORITY SITE FOR REASSESSMENT IN 1991
REASON:
Though little oil was observed in this area, grassy areas on both sides of Port Dick Creek and tidal islands within the creekbed were not surveyed because of extensive vegetation. An early spring survey is needed before grasses and other vegetation make an accurate and complete survey difficult. This subdivision is in an ADF&G listed anadromous stre

EXXON
NAME Jon Czarnecki SIGNATURE Jon Czarnecki

☐ YES ☒ NO PRIORITY SITE FOR REASSESSMENT IN 1991
REASON:

The very light oil that is on the mouth of the River is IN the rocks And Next to the Archeological site. The up River Side of this Segment looks good.

COMMENTS The computer map does not reflect the extensive estuary which was treated. Tall grasses prevented evaluation of this area during the ASAP, but it was treated. Oiling remaining near the mouth of the estuary is minor. There is somewhat more oil near the "archaeologic" site at the estuary mouth.

COMMENTS: Monitor Exxon work crew (9 people) and supervisor John Czarnecki cleanup of oil at Port Dick Creek - Crew picked up oil on grass covered islands of creek area, on rocky shoreline south side and on beach adjacent to the mouth of the stream on west side (30 bags picked up here). This section was in PD-4 Exxon wanted to pick it up. Coast Guard objected without work order.

Eleven [illegible] oil picked up on the grass covered area of Port Dick Creek - worked 800 meters up stream.

NAME D. Hill of ADF&G SIGNATURE Douglas D. Hill

[X] NTR A trace of oil remains — Looks Good.

*

EXXON
NAME R Coulter SIGNATURE Reg R. Coulter

[✓] NTR I CONCUR WITH COMMENTS OF OTHER REPS. NO FURTHER CONSIDERATION IS NEEDED.

LANDMANAGER
NAME J. Johnson OF AONR SIGNATURE

[X] NTR
Concur with USCG/NOAA comments. Very little oil observed, no sheening observed in Port Dick creek, minor SOR. Though this segment is within Kachemak Bay State wilderness park, the initiation of further cleanup activities within this segment would probably not be justified.

USCG/NOAA
NAME Chief Jensen / G. SHIGENAKA SIGNATURE

[X] NTR There is no longer any detectable oil present on the water, adjoining shorelines, or places where it is likely to reach the water again.

SURVEYED PORTION OF THE SEGMENT WAS THE WESTERN END OF THE WEST ARM OF PORT DICK, AN ANADROMOUS STREAM WHICH EXPERIENCED A NOTABLE DEGREE OF OILING IN 1989. BOTH NORTH AND SOUTH BANKS OF THE STREAM (DICK CREEK) AS WELL AS ANY ISLANDS IN THE STREAM (HEMINGWAY, 1938) WERE ASSESSED. RELATIVELY MINOR AMOUNTS OF SOR WERE OBSERVED ON THE NORTH BANK, AND OILED SUBSTRATE WAS RECOVERED TO THE EXTENT POSSIBLE. ONE MOUSSE PATTY WAS FOUND AND RECOVERED ON THE SOUTH BANK. DESPITE WHAT WAS DESCRIBED BY ADF&G REPS AS EXTENSIVE OILING IN THE LOWER REACHES OF THE CREEK, STREAMSIDE VEGETATION APPEARED HEALTHY. STRANDED PINK SALMON JUVENILES (LIVE AND DEAD) WERE SEEN ALONG THE CREEK, AND SOME WERE RECOVERED BY ADF&G FOR HFO ANALYSIS. THE SOUTHEASTERN END OF THE SURVEYED PORTION INCLUDED AN APPARENT ARCHEOLOGICAL SITE, AND AT LEAST ONE ARTIFACT WAS OBSERVED. ADNR REP SHOULD BE CONTACTED FOR MORE INFO ON THE LATTER.

OG COMMENTS: This segment was the seaward, estuarine end of ANAD. Stream # 242-42-10460. The oiling of this site consisted of small tar patties containing a large percentage of sediment on the longitudinal bars. There was some highly weathered mousse in the cracks of the bedrock outcrop at the mouth of the stream in one small area ($1 m^2$). The oil reported by the NOAA representative (G. Shigenaka) was not observed by the OG, but it was in a region where previous oiling was documented.

PHOTOGRAPHS: ROLL # FRAME #

COMMENTS/OBSERVATIONS (to be completed in oiled subdivisions only):

This is the most productive spawning stream in the lower Cook Inlet area. No oil was observed in or along the intertidal spawning area. No oil was observed in the beach grass berms adjacent to the stream and the area looks very good. Filamentous algae, sea lettuce and beach peas were lush and thriving in this segment. The only evidence of past cleanup work in the area are some deep holes in the gravel berms adjacent to the stream. Even though large sections of the beach grass root system there were removed, the grass is regrowing and the intertidal area looks exactly as it did 16 years ago.

COMMENTS:
THE ENTIRE INTERTIDAL PORTION OF THE CREEK WAS SURVEYED. TRACE OF OIL REMAINS. THE VECO WORKERS PICKED UP APPROXIMATELY 15 POUNDS OF OILED SEDIMENT, THE MAJORITY WAS REMOVED FROM THE POINT OF LAND ON THE SOUTH SHORE AT THE CREEK MOUTH. A SIGNIFICANT AMOUNT OF OIL COVERED THE ENTIRE INTERTIDAL PORTION OF PORT DICK CREEK IN 1989. GREG DEMERS (ADF&G), BILL DAY AND SANDY CRONLAND (ADNR) SPENT A CONSIDERABLE AMOUNT OF TIME PICKING UP OIL AND DIRECTING WORK CREWS IN 1989. FOUR PINK SALMON FRY WERE COLLECTED FOR POSSIBLE MFO ANALYSIS.

☑ NTR I CONCUR WITH COMMENTS OF OTHER REPS. NO FURTHER CONSIDERATION IS NEEDED.

LANDMANAGER
NAME J. JOHNSON OF AONR SIGNATURE

☒ NTR
Concur with USCG/NOAA comments. Very little oil observed, no sheening observed in Port Dick creek, minor SOR. Though this segment is within Kachemak Bay State wilderness park, the intrusion of further cleanup activities within this segment would probably not be justified.

USCG/NOAA
NAME Chief Jensen [redacted] SHIGENAKA SIGNATURE

☒ NTR There is no longer any detectable oil present on the water, adjoining shorelines, or places where it is likely to reach the water again.

SURVEYED PORTION OF THE SEGMENT WAS THE WESTERN END OF THE WEST ARM OF PORT DICK, AN ANADROMOUS STREAM WHICH EXPERIENCED A NOTABLE DEGREE OF OILING IN 1989. BOTH NORTH AND SOUTH BANKS OF THE STREAM (DICK CREEK) AS WELL AS ANY ISLANDS IN THE STREAM (HEMINSWAY, 1938) WERE ASSESSED. RELATIVELY MINOR AMOUNTS OF SOR WERE OBSERVED ON THE NORTH BANK, AND OILED SUBSTRATE WAS RECOVERED TO THE EXTENT POSSIBLE. ONE MOUSSE PATTY WAS FOUND AND RECOVERED ON THE SOUTH BANK. DESPITE WHAT WAS DESCRIBED BY ADF&G REPS AS EXTENSIVE OILING IN THE LOWER REACHES OF THE CREEK, STREAMSIDE VEGETATION APPEARED HEALTHY. STRANDED PINK SALMON JUVENILES (LIVE AND DEAD) WERE SEEN ALONG THE CREEK, AND SOME WERE RECOVERED BY ADF&G FOR MFD ANALYSIS

OG COMMENTS: This segment was the seaward, estuarine end of ANAD. Stream # 242-42-104 The oiling of this site consisted of small tar patties containing a large percentage of sediment on the longitudinal bars. The was some highly weathered mousse in the cracks of the bedrock outcrop at the mouth of the stream in one small area (1m²). The oil reported by the NOAA representative (G. Shigenaka) was not observed by the OG, but it was in a region where previous oiling was documented.

35) COMMENTS: The entire intertidal portion of the creek was surveyed. Trace oil remains. The vac workers picked up approximately 15 pounds of oiled sediment (the majority was removed from the point of land on the south shore at the creek mouth.
A significant amount of oil covered the entire intertidal portion of Port Dick Creek in 1989. Greg Demers (ADF&G) Bill Day & Sand Cronland (ADNR) spent a considerable amount of time picking up oil and directing work crews in 1989.
4 Pink Salmon fry were collected for possible MFO analysis.
