ALASKA POWER AUTHORITY
SUSITNA HYDROELECTRIC PROJECT
MONTHLY PROGRESS REPORT

Report No. 18

Period: July, 1981

Progress Report No. 18 covers the activities on the Susitna Hydroelectric Project for the month of July, 1981.

Task 1, Power Studies, is complete.

Task 2, Survey and Site Facilities, continued with logistical support and resupply of all field camp activities. Approximately 75 personnel were engaged in field activities, exclusive of the ADF&G camps. Work continued indirectly on the access roads while the construction fleet size is established. Access road capital cost estimates are being revised. CIRI/H&N continued its camp operation and resolved minor problems with the camp's sewage effluent quality. R&M initiated aerial photography of the northern alternate access corridor and the transmission corridor from Point McKenzie to Willow and Healy to Fairbanks.

Task 3, Hydrology, continued with the approval of MRI to process the 1980 climate data cassettes. The regional flood studies report has been reviewed by Dr. Carlson of the University of Alaska and his comments are being reviewed by R&M. Revised SSARR model runs are being made to estimate the maximum flood in the basin. Calibration continued on the HEC-2 open water model and the ice simulation model. The work plan formulated by R&M for morphological studies is being finalized. R&M updated the Field Data Index to include data from the past eight months and distributed same to those on the mailing list. Crest stage data was recorded at Gold Creek for a 50,000 cfs flood. Almost daily readings were taken on the Denali staff gage. The first bedload sampling trip was conducted by USGS and R&M. All climatic stations and stream gages are operating satisfactorily.

Task 4, Seismic Studies, continued with finalization of WCC's 1981 scope of work and budget. This will be discussed at the site in early August with the field personnel. Alternative approaches to the network monitoring program were submitted to Acres for review; a final approach will be determined in early August. Final updating and review of information on deep, very deep and very long reservoirs was completed. The Quaternary geology field program was completed this month. A preliminary Quaternary geology map and interpretation summary was prepared. Mapping is being conducted primarily along the Talkeetna-Broxson Gulch thrust fault, the Susitna feature and the "Fins" features. The field geophysics program is complete and the LSA-CIR photography was completed and interpreted with linear features being field checked.

Task 5, Geotechnical Investigations, continued by maximizing the flow of field information and its reduction for use in geologic interpretation. Acres and Mr. Rivard's review of R&M's photo interpretation report is complete and the comments will be forwarded to R&M in early August. Work on completing the materials testing program's design was emphasized during July.

The exploration program at Devil Canyon was completed as borehole BH-3 was finalized. At Watana, borehole BH-12, 800 feet deep, was drilled to delineate a major discontinuity on the south abutment. Boreholes BH-1 and BH-13 are to be drilled next. Geologic mapping at the Devil Canyon site was completed and only a few specific areas outside the specific dam site are to be completed at the Watana site. Auger drilling in Watana's Borrow Area H was completed with a total of eight holes being drilled. Auger drilling was started at Borrow Area D, with three holes being completed. The seismic refraction surveys scheduled for this year were completed. Eight lines were made at Watana and one at Devil Canyon. A draft of the report will be available in late August. Test pitting was completed at Devil Canyon in the alluvial four area.

The Final Geotechnical Report - 1981 Activities was returned to the printers for improvement in printing quality on some pages and will be distributed at the end of the month.

Task 6, Design Development, continued with design criteria being revised due to more detailed design work at the site. An updated design criteria summary was to be produced this month. However, in light of these revisions a more fully detailed version will be produced next month. Spillway alternatives are being reviewed to alleviate nitrogen supersaturation and cost estimates are being finalized. Preliminary camp population loading and durations were established. Work commenced on the Watana and Devil Canyon diversion schemes by establishing the height of the cofferdam required for various tunnel diameters. Work commenced on the capital cost estimates of the tunnels and associated cofferdams required to optimize the diversion schemes.

Task 7, Environmental Studies, continued with the annual reports for all sub-tasks being delivered to FERC for their comments. During in-house discussions a schedule of formal work products for the remainder of Phase I was developed. Acres participated in the formation of a Fisheries Mitigation Task Force. Discussions were held with ADF&G fisheries regarding reporting requirements and schedules. A response was prepared to APA's concerns regarding coordination between the wildlife and habitat studies' programs.

TES continued work during the month by making recommendations to Acres concerning the environmental acceptability of disposing overburden from the Watana dam abutments directly into the river. Also, the status of the escalation report was discussed with Acres and other subcontractors. Discussions were held between TES, FOA, Acres and APA concerning development of a non-Susitna power scenario. Testing for the presence of cultural resources was conducted in 45 of 56 1981 survey locales. Two additional cultural resource sites were located bringing the total to 84 discovered to date. The final Land Use Annual Report was issued. TES personnel met with University of Alaska personnel to field study potential recreation sites. This field study was hampered by poor weather. The TES procedures manual for Transmission Line Corridor Environmental Studies was finalized for in-house review. The fish ecology study team continued a literature search pertaining to their respective study subjects. The TES group leaders of the various study areas met to discuss the preparation of the wildlife habitat analysis for access route evaluations. Field operations continued to monitor bird and nongame mammals habitat and to monitor radio collared foxes during the period. Plant ecology teams continued vegetation mapping and searches for endangered plant species. A draft outline for the Abstract, Feasibility Report, and License Application Exhibit E was developed and sent to Acres for review.

Stephen R. Braund & Associates commenced work in late June on the sociocultural study by attending numerous meetings with Tom Lonner regarding strategy, organization, work plan and progress. A review of APA's correspondence files and public testimony related to the Talkeetna Susitna Hydroelectric meeting was accomplished during the month. Two field trips were held to interview local residents was held during the month.

Task 8, Transmission, continued with the first draft of the planning memorandum entitled, "Preliminary Transmission System Analysis" was prepared during the month. This memorandum will review all work in the electric system studies completed to June 15, 1981. A letter was sent to APA summarizing the results of the transmission alternatives studies. Transmission line routing was identified on USGS maps and cooperation was maintained with other subtasks concerning this task.

Task 9, Construction Cost Estimates and Scheduling, continued with Acres requesting FMA to assemble data concerning labor costs, material and equipment costs, transportation alternatives and the like for the final costing of the project. A field trip will be held in early August to discuss these items.

Task 10, Licensing, continued with discussion with several State of Alaska agencies to determine the efforts of recent changes in regulatory programs. A draft outline for the March 1981 feasibility report is being prepared.

Task 12, Public Participation, continued with Acres providing information to Jean Buchanan regarding the damsite selection process. An outline was prepared for the October public meetings.

Task 13, Administration, continued by monitoring and updating the project schedule to August 3, 1981. During July additional funding allocations were approved by APA. Acres' insurance broker reviewed Acres' subcontractors' insurance policies and confirmed they are in accordance with their contracts.

Task 14, ADF&G Support, continued with routine functions continuing during the report period.

TASK 1 - POWER STUDIES

Task complete.

TASK 2 - SURVEY AND SITE FACILITIES

ACRES ACTIVITIES

Subtask 2.02 - Provision of Field Camps and Associated Logistic Support

Logistical support and resupply of all field camp activities continued throughout the month with the Watana Camp and High Lake Lodge fully occupied and with the 15-man archaeology field camp and the avian ecology field camp in operation. Total personnel in the field reached approximately 75, exclusive of the ADF&G camps.

Logistical support was provided to the resident and juvenile ADF&G group in the form of helicopter moves only.

Subtask 2.05 - Land Acquisition Analysis

Initial discussions were held with CIRI/H&N on initiation of work for this sub-task.

Subtask 2.10 - Access Roads

Work continued indirectly on the access roads. Under Task 9, work continued to firm up the construction equipment fleet required for Watana and Devil Canyon. When the construction equipment fleet is established, work can proceed on final evaluation of the logistics cost for the access alternatives. Work has proceeded on revising capital construction costs of the access alternatives. Environmental data gathering and assessments on the access alternatives are continuing under Task 7.

Meetings were held in Anchorage with the recreation planning group from the University of Alaska to coordinate access planning with recreation planning.

CIRI/H&N ACTIVITIES

CIRI/H&N continued its regular operation, maintenance, and related inspection of camp facilities. Minor problems have been encountered with the camp's sewage effluent quality during this period. However, continued monitoring and mechanical adjustments of selected aspects of the treatment plant operations are gradually improving these effluent characteristics.

R&M ACTIVITIES

Subtask 2.08 - Aerial Photography and Photogrammetric Mapping

Aerial photo was initiated for the northern alternate access corridor and the transmission corridor from Point McKenzie to Willow and Healy to Fairbanks.

TASK 3 - HYDROLOGY

ACRES ACTIVITIES

Subtask 3.03 - Field Data Collection and Processing

Routine monitoring of R&M field work and processing of data continued. Processing of 1980 climate data cassettes by MRI has been approved. Relocation of several snow courses for this winter's observations were finalized.

Subtask 3.05 - Flood Studies

The regional flood studies report prepared by R&M has been reviewed by Acres' consultant, Professor R. Carlson of the University of Alaska. His comments are being discussed with R&M. Data collection for reevaluation of PMF is complete. Detailed analyses have been performed to estimate the PMF and associated dew point values. Historical storms have been analyzed for revised flood reconstitution studies and revised SSARR model runs are being made to estimate the probable maximum flood in the basin.

Subtask 3.06 - Hydraulic and Ice Studies

Computer runs were continued for the river reach between Chulitna confluence and Portage Creek to calibrate the HEC-2 open water model. Work continued on data input and calibrating of the ice simulation model. Results of temperature modeling of reservoirs are being reviewed to assess if further refinements are needed.

Subtask 3.07 - Sediment Yield and River Morphology

The work plan formulated by R&M for morphological studies is being finalized. Acres is exploring possible involvement of leading experts on the subject to review R&M work.

Subtask 3.10 - Lower Susitna Studies

Several hydrologic analyses of historical river flows required for environmental assessment of pre-project conditions are currently being carried out by R&M and USGS under Acres' direction. The information package on pre and post-project flow conditions is being assembled for TES.

R&M ACTIVITIES

Subtask 3.02 - Field Data Index and Distribution System

The Field Data Index was updated to include data from the past eight months, and distributed to those on the mailing list.

Subtask 3.03 - Field Data Collection and Processing

All streamgages operated by USGS and R&M are operating satisfactorily. Crest stage data was recorded at Gold Creek from a 50,000 cfs flood. Almost daily

readings were taken on the Denali staff gage. Several snow course markers were relocated. Data was gathered for a rising and falling hydrograph at Gold Creek and Vee. The first bedload sampling trip was conducted by USGS and R&M. Suspended sediment samples were collected for the settling column studies. All climatic stations are operating satisfactorily. A purchase order was issued to MRI to process all data tapes collected through June 1981. R&M is programming its computer to accept the edit program.

Daily readings were taken at the Watana Camp evaporation pan. Velocity points on Susitna Basin glaciers were surveyed and thermocouple readings were taken. The draft report of all ice studies to date in the Susitna River was completed.

Subtask 3.05 - Flood Studies

Dr. R. Carlson's comments on the draft close-out report were transmitted to Acres for review.

Subtask 3.06 - Hydraulic and Ice Studies

Calibration of the HEC-2 water surface profile model continued.

Subtask 3.07 - Sediment Yield and River Morphology Studies

A scope of work for river morphology studies was drafted. Studies are being co-ordinated with the instream flow studies group.

TASK 4 - SEISMIC STUDIES

ACRES ACTIVITIES

The final scope of work and budget of the 1981 activities has been finalized with Woodward-Clyde Consultants. A field trip to the site is scheduled for early August at which time the Task Supervisor will view and discuss the field program with WCC personnel at the site. Acres is continuing to provide coordination and logistic support of WCC's field activities.

WCC ACTIVITIES

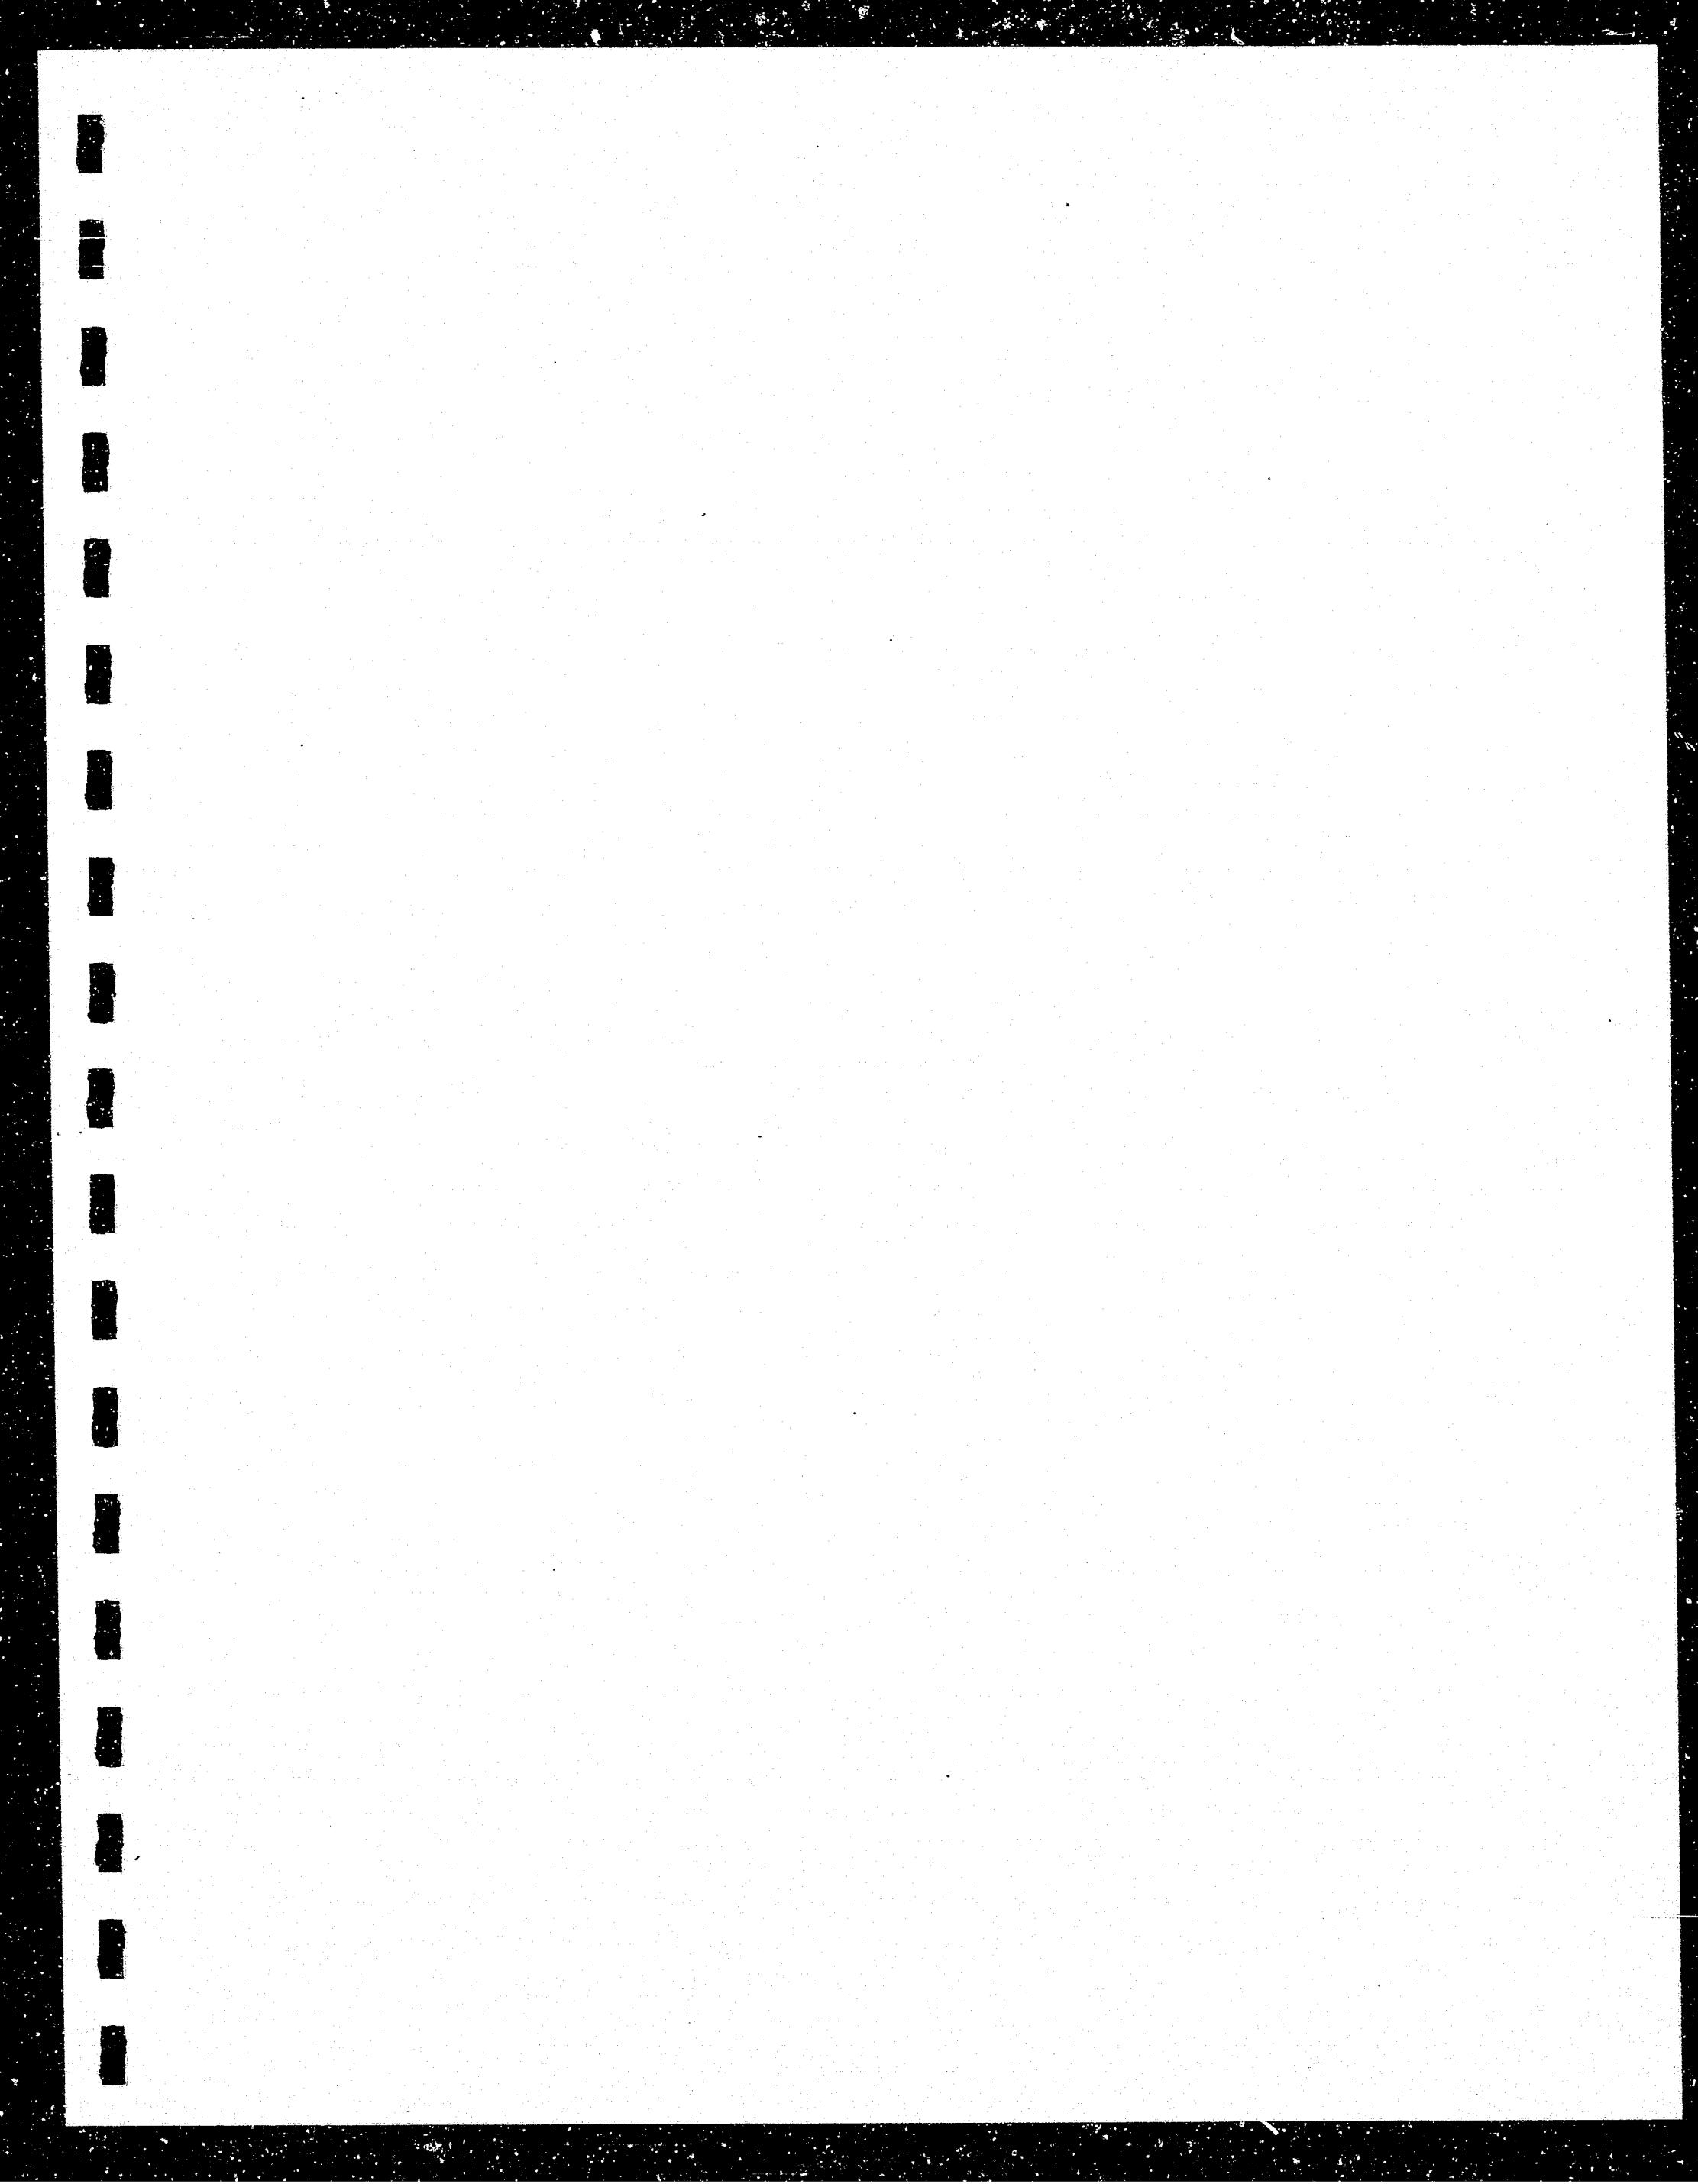

Subtask 4.08 - Preliminary Dam Stability Analysis

This task is included as part of Subtask 4.13.

Subtask 4.09 - Long-term Seismologic Monitoring Program

A letter describing alternative approaches to preparation of the network monitoring manual was sent to Acres for review and comment. We expect to agree on an approach early in August 1981 and commence work on the manual at that time.

Records of historic events in Alaska are being received, and WCC expects to receive available records by early August 1981. Analysis of the records will commence at that time.

Data on Benioff Zone's seismicity for Japan and South America are being received, and WCC expects to receive all appropriate data by early August 1981. Analysis of the records will commence at that time.

Subtask 4.10 - Reservoir Induced Seismicity

Final updating and interpretation of the information available on deep, very deep, and very large reservoirs was completed. Statistical modeling of the relationship between reservoir induced seismicity and in-site, noninduced seismicity will be undertaken during August 1981.

Subtask 4.11 - Seismic Geology Field Studies

The Quaternary geology field mapping program was completed this month. A preliminary Quaternary geology map has been prepared along with a summary of key interpretations. A total of 10 samples of organic material have been sent to Geochron in Cambridge, Massachusetts for radiometric age dating. Age dates are expected to be available in late August or early September 1981. Dr. Norm Ten Brink of Grand Valley State College, Michigan, conducted a week long field review of the Quaternary field work. His review comments were incorporated into the final two weeks of the Quaternary field studies.

Mapping has been conducted primarily along the Talkeetna-Broxson Gulch thrust fault, the Susitna feature, and the "Fins" feature. This mapping should be completed in early August 1981. Mapping has been initiated along virtually all of the lineaments in the Devil Canyon site area and will continue through August 1981.

The field geophysics program has been completed. A total of 12 magnetic traverses totalling 72,550 feet in length were conducted across the Talkeetna-Broxson Gulch thrust faults and the Susitna feature. One seismic refraction line, 2,200 feet long, was conducted across the Talkeetna Broxson Gulch thrust fault.

Low sun-angle, colornear infrared (LSA-CIR) photography was received and has been interpreted. Linear features observed on the LSA-CIR have been field checked along the Talkeetna-Broxson Gulch thrust fault and Susitna features.

Based on the work conducted to date, a trench site was selected along the Talkeetna-Broxson Gulch thrust fault. The trench site is located south of Fog Creek and east of Stephan Lake (approximate coordinates are 62 degrees 42 feet north latitude and 148 degrees 42 feet west longitude). The trench was scheduled to be excavated on July 22, 1981. However, logistical complications developed during shipment of shoring. Based on current projection, WCC expects to start trenching on August 1, 1981.

Phil Birkhahn and Jon Lovegreen of WCC met with Warren Knolleberg of the U. S. Geological Survey in Menlo Park, California, on July 1, 1981. Dr. Knolleberg's mapping of the Broxson Gulch thrust fault and the fault's relationship to the Talkeetna thrust fault were discussed. This information has been incorporated into the 1981 field studies.

Subtask 4.12 - Evaluation and Reporting - 1981

A request was received from Acres for price and time estimates to produce an additional 251 copies of the 1980 Task 4 Interim Report and 300 copies of the 1981 report. An estimate for both reports was given to Lance Duncan by phone on July 10, 1981.

A question and answer format for the APA newsletter discussion of the seismic geology studies was reviewed by Jon Lovegreen. Review comments were forwarded to Jim Gill of Acres for review and transmittal to Nancy Blunck of the APA.

Subtask 4.13 - Ground Motion Studies

The revised schedule received from Acres in June 1981 was discussed. It was agreed that preliminary ground motion data could be estimated and presented to Acres on September 15, 1981, provided results from geologic, seismologic, and reservoir induced seismicity studies are available by September 5, 1981.

TASK 5 - GEOTECHNICAL INVESTIGATIONS

ACRES ACTIVITIES

Acres' emphasis on Task 5 for the month of July has been maximizing the return of information from the field and reduction and summarization of this information for use in geologic interpretation. Intensive effort has been concentrated on production of engineering data summaries for use in generation of design criteria.

Subtask 5.02 - Photo Interpretation

Review of R&M's draft report was completed. Mr. A. L. Rivard has provided his review of this report, and combined Acres' comments will be transmitted to R&M for finalization in early August. R&M was authorized to proceed with the air photo interpretation of the northern access corridor realignment as well as photo interpretation on the north and south intertie.

Subtask 5.05 - Exploratory Program Design (1981)

Following the July exploration program design finalization, emphasis was placed on completing the materials testing program's design. A careful evaluation of test requirements is being conducted to ensure optimal return of information, both for estimating and design information needs.

Subtask 5.06 - Exploratory Program (1981)

The exploration program continued at full speed with Devil Canyon boring BH-3 (upper left abutment near centerline) being the fourth and last hole at the site. Between the 1980 and 1981 programs, two deep boreholes were drilled in the right abutment and proposed powerhouse areas, two in the valley at river

elevation (including one under the river from north to beyond the south side), one on the upper left abutment, and two under the saddle dam and lake.

At Watana, BH-12 was drilled on the south abutment to delineate a major discontinuity detected by a seismic line. The hole was drilled a full 800 feet intersecting a severely altered zone in its lower half. Interpretation and detailed logging was continuing at the end of July, but from preliminary results, the hole appears to have fulfilled its intended purpose. The next scheduled holes are BH-1 to investigate the seismic line anomaly downstream of the centerline on the right abutment, followed by BH-13 across the "The Fins" structure.

Geologic mapping at the Devil Canyon site was completed and only a few detailed areas outside of the specific dam site at Watana remain to be completed in August and September.

Auger drilling in Watana's Borrow Area H was completed with a total of eight holes being drilled. These holes indicated the area to be overlain by a layer of glacial till about 25 to 40 feet in thickness, which could provide an alternate source of core material. Samples collected from the drilling have been returned to Anchorage for lab testing. Auger drilling was started in Watana's Borrow Area D, with approximately three holes being completed.

A total of eight seismic lines were completed at the Watana site, and one line was completed at the Devil Canyon site during the month. This completes the seismic refraction surveys scheduled for this year. It is expected that a draft report will be available by the end of August.

These seismic lines were designed to further define the limits of the relict channel, determine overburden thickness, locate low-velocity zones in the bedrock to assist in siting some of the diamond drill holes, and to check thickness of borrow materials.

Test pitting was completed at Devil Canyon in the alluvial fan area. Due to the extent of the deposit and the steep side slopes, two angled trenches were excavated down the slope thereby exposing a good lateral and vertical exposure of borrow material. Field logs indicate the material is as anticipated; several auger holes are to be drilled in August. Lab testing is underway.

Summary drill and test pit logs are being finalized in Buffalo for final typing in September and October. Geologic logging of the 1980 cores is completed, and summary logging of the COE cores has commenced.

Subtask 5.08 - Data Compilation

The Final Geotechnical Report - 1980 Activities was returned to the printers for improvements in printing quality on some pages and will be distributed at the end of the month.

Data reduction of all COE and Acres' geological mapping has been put on base sheets, and interpretation and production of rough geologic layouts is underway. Preparation of extensive cross-sections and analysis of subsurface data is being conducted to aid in the data reduction.

Discussions continued with the USGS and USBR to locate the original field data from the 1950's Devil Canyon investigations. One USBR report has been transmitted, and it contained a limited additional amount of information on boreholes. However, the data did allow approximate correlation of the USBR and state plane coordinate systems, thereby correcting location plans for explorations. Receipt of further data is dependent on locating the USBR files.

TASK 6 - DESIGN DEVELOPMENT

ACRES ACTIVITIES

Subtask 6.09 - Design Criteria for the Watana Development

Subtask 6.10 - Design Criteria for the Devil Canyon Development

Design criteria has been reassessed and expanded in light of more detailed design work at the site. It was intended to produce an updated copy of the criteria this month but, with the closer understanding of the final arrangement concepts, it is anticipated that the draft criteria will be fully documented next month in expanded form.

Subtask 6.11 - Preliminary Design of Watana Dam

Development of design criteria for the Watana Dam is continuing.

Subtask 6.15 - Watana Spillway Alternatives

Subtask 6.16 - Devil Canyon Spillway Alternatives

Spillway alternatives are being examined to alleviate nitrogen supersaturation from the downstream discharges. Costing of alternative spillways is almost complete, and the modifications resulting from the most recent alternatives are being incorporated.

Subtask 6.20 - Access and Camp Facilities

Work continued on the camp facilities during the report period. Preliminary population loadings and durations for the camps were established. Typical camp designs and drawings for two previous projects were obtained and are currently being evaluated.

Subtask 6.21 - Watana Diversion Schemes

Subtask 6.22 - Devil Canyon Diversion Schemes

Work continued on development of the Watana and Devil Canyon diversion schemes. Maximum water surface elevations were established for the various tunnel diameters, thus establishing the height of cofferdam required. Work commenced on the capital cost estimates of the tunnels and associated cofferdams required to optimize the diversion schemes.

Subtask 6.23 - Optimize Watana Power Development

Optimization of installed capacities has continued, and alternative types of powerhouses are being examined.

Subtask 6.25 - Optimize Dam Heights

The optimum height of the Watana dam has been determined.

TASK 7 - ENVIRONMENTAL STUDIES

ACRES ACTIVITIES

Subtask 7.01 - Administration

Annual reports for all subtasks were delivered to FERC for their preliminary review and comment. In-house discussions were held concerning documentation of the formal agency coordination process. A schedule of formal work products was developed for the remainder of Phase I. This schedule was discussed with TES.

Continued environmental input into Task 6 was provided.

Subtask 7.05 - Socioeconomic Analysis

Continuing discussions were held with APA and FO&A regarding contents of the final work product. Dr. Hayden attended a meeting to coordinate socioeconomic studies.

Subtask 7.10 - Fish Ecology Studies

Acres participated in the formation of a Fisheries Mitigation Task Force. Discussions were held with ADF&G's fisheries regarding reporting requirements and schedules.

Subtask 7.11 - Wildlife Ecology Studies

A response was prepared to APA concerns regarding coordination between wildlife and habitat studies' programs.

TES ACTIVITIES

Subtask 7.01 - Administration

TES prepared and submitted to Acres a schedule of work products for the remainder of Phase I, copies of which were sent to TES's subcontractors and ADF&G. TES also prepared a distribution of cost allocations; this was sent to TES's subcontractors.

Important discussions held during the month included preliminary recommendations made to Acres concerning the environmental acceptability of disposing overburden from the Watana dam abutments directly into the river, and the status of the escalation report was discussed with Acres and other subcontractors.

Subtask 7.05 - Socioeconomic Analysis

Work continued on refinement of methodology and assumptions to be utilized in Work Package 4 - Forecast Without Susitna. Discussions were held between the socioeconomic project leader for FO&A and the APA concerning development of a non-Susitna power scenario as well as between TES and Acres.

The TES group leader and project leader and other staff members for FO&A met in Alaska to discuss progress as well as problems related to the Work Package 4 Forecast. The TES group leader met with several Alaska state and local agencies concerning the exchange of data and information and general Susitna study coordination.

Subtask 7.06 - Cultural Resource Investigation

Testing for the presence of cultural resources was conducted in 45 of 56 1981 survey locals. Testing also included areas of auger holes, bore holes, seismic lines, and test trenches. Two additional cultural resource sites were located. Thus, a total of 84 sites have been discovered to date, nine of which have been systematically examined. Soil profile interpretation was conducted. Three tephra (volcanic ash layers) have been identified and are being dated.

An historic cabin on Kosina Creek, formerly owned by trapper Elmer Simco, was recorded.

Subtask 7.07 - Land Use Analysis

TES printed and distributed the final Land Use Annual Report. The group leader traveled to Alaska and conducted field work with the land use team from the University of Alaska. Due to poor weather, some aspects of the analysis of access corridors and visual resources could not be accomplished. During this trip, the group leader met with numerous federal, state, and local planning and management agency personnel concerning their land use efforts in the Susitna basin.

Subtask 7.08 - Recreation Planning

The TES group leader met with University of Alaska recreation planning staff in the field and conducted further analysis of potential recreation sites. This effort was hampered by the poor weather conditions. During this trip, the group leader met with state and local recreation and planning agency personnel concerning plans for recreation in the upper Susitna basin.

Subtask 7.09 - Transmission Corridor Assessment

TES prepared the draft Procedures Manual for the Susitna Hydroelectric Project transmission line corridor environmental studies. In-house review of this document was continuing at month's end.

All TES's subcontractors were actively involved in transmission corridor reviews. Their input will be utilized in the further environmental analysis of transmission corridors.

Subtask 7.10 - Fish Ecology Studies

Much of the Fish Ecology study team effort was directed towards the continuation of the literature search on topics pertaining to impact/mitigation issues, subarctic and arctic lakes and impoundments, estuarine concerns as well as resident fish ecology and life history.

The formation of a Fisheries Mitigation Task Force Core Group was initiated. Possible group members, initial meeting plans, and discussion topics were considered. An outline and work plan for completion of the Fisheries Abstract was prepared.

Alaska operations included visits to ADF&G field crews working throughout the Susitna study area. Discussions on the development of an instream flow study plan have taken place. A brief summary on the June dissolved gas study conducted by D. Schmidt was completed.

Subtask 7.11 - Wildlife Ecology Studies

Several meetings and discussions occurred among the group leader investigators. The group leader visited Fairbanks and discussed the project with the principal investigator for furbearers and the investigator in the nongame mammal discipline. The main topic of discussion was the preparation of the wildlife habitat analysis to be used in evaluating access route alternatives. The TES group leader provided some ideas concerning the relationship between the wildlife and fisheries efforts in regard to mitigation planning. Plans were formulated for a trip with Dr. Banfield during August to meet with ADF&G and to visit the study area for the purpose of further evaluating the potential for impact on caribou and to compare the access route alternatives.

TES submitted to Acres a detailed written description of the technical information that TES will require from ADF&G to permit impact assessment concerning big game.

Field efforts during July in the birds and nongame mammals disciplines included initiation of data analysis of the breeding bird censuses completed during late June. Field work centered around collecting additional habitat data, continued nongame mammal surveys, ground checks of raptor nests, and review of access route alternatives. The principal investigator began the analysis of habitat value, needed as input for the access road habitat comparison.

Field efforts in the furbearer studies during July resulted in the location of two previously undiscovered fox dens and the collaring of five additional foxes. Monitoring of radio collared foxes continued, as well as an intensive study of denning behavior and the identification of critical den related foraging areas. A reconnaissance level survey of the access route corridors was conducted and included both ground surveys of some areas as well as an aerial review of all

alternatives. Recommendations based on that survey are currently being prepared.

Subtask 7.12 - Plant Ecology Studies

July progress included a meeting between the plant ecology group leader and two members of the Army Corps of Engineers in Anchorage to discuss Wetlands. Also the group leader met with Karl Schneider to discuss concerns related to the coordination of the vegetation and wildlife efforts.

Field work by the plant ecology team in the upper basin continued. A survey was made for endangered and threatened species. Vegetation mapping and searches for endangered and threatened species were performed on the alternative access corridors.

Field work by the AES continued in the downstream area. High water during mid-July permitted observation under flood conditions. Information concerning the downstream area was obtained from R&M.

Subtask 7.14 - Access Route Environmental Analysis

Field work by various subtasks concerning the alternative access plans progressed during July, and data analysis commenced toward the recommendation of a selected access plan.

Subtask 7.15 - Preparation of FERC Application

A draft outline for the Abstract, Feasibility Report, and License Application Exhibit E was developed and sent to Acres for review and approval. It was also distributed to all TES's subcontractors and consultants.

STEPHEN R. BRAUND & ASSOCIATES ACTIVITIES

Work commenced in June on the sociocultural study by attending numerous meetings with Tom Lonner regarding research strategy, organization, work plan and progress. An interview with APA's staff determined their understanding of public feelings relating to the project. A review of APA correspondence files and public testimony related to the Talkeetna Susitna Hydroelectric meeting was accomplished during the month. A review of the socioeconomic reports of other subcontractors pointed out areas where further study was required. Two field trips to the study area to interview local residents were undertaken during the month.

TASK 8 - TRANSMISSION

ACRES ACTIVITIES

As reported previously, notes of meeting in draft were distributed to each of the utilities that Acres met with during the month of April for their comments or approval. Only GVEA and AMLP responded. After a phone call in early July,

MEA answered on July 15, 1981. FMVS and CEA have not responded up to the time of writing of this report.

Subtask 8.01 - Transmission Line Corridor Screening

The draft of the close-out report was nearly completed. This report was rewritten to conform to the screening methodology used in the Development Selection Report.

Subtask 8.02 - Electric System Studies

The first draft of a planning memorandum entitled "Preliminary Transmission System Analysis" was being prepared. This memorandum will review all the work completed on electric system studies up to June 15, 1981.

During this period a letter was sent to APA on the subject of selection of transmission alternatives. This letter summarized the results of system studies with respect to transmission voltage, number of circuits and electric conductor sizes. A copy of this letter was also sent to Commonwealth Associates for their information.

Subtask 8.03 - Transmission Line-Route Selection 1981

Work continued on this subtask. Close cooperation with other subtasks such as aerial photography, environmental and geological studies were maintained. The centerline of some possible transmission line routes were being identified on USGS maps. Inputs from other subtasks were being reviewed to determine their impact on the transmission line route.

TASK 9 - CONSTRUCTION COST ESTIMATES AND SCHEDULES

ACRES ACTIVITIES

Subtask 9.01 - Assemble Cost and Schedule Data

Acres requested on July 6, 1981, that FMA begin assembling data concerning labor costs and availability, material and equipment costs, transportation requirements and access alternatives, and cost trends and escalation. These items are to be discussed with Acres' Task 9 Coordinator and Senior Estimator, in Anchorage, during the week of August 10.

TASK 10 - LICENSING

ACRES ACTIVITIES

Work during the month included discussions with several State of Alaska agencies to determine the effects of recent changes in regulatory programs. A formal agency coordination draft program for the remainder of the study and coordination of the license application requirements was emphasized during the month. A draft outline for the March 1981 feasibility report is also being prepared.

TASK 12 - PUBLIC PARTICIPATION

ACRES ACTIVITIES

Information was provided to Jean Buchanan regarding the damsite selection process. An outline was prepared for the October public participation meetings.

TASK 13 - ADMINISTRATION

ACRES ACTIVITIES

Subtask 13.04 - Develop Schedule Control System

Work continued on monitoring and updating the project schedule to August 3, 1981.

Subtask 13.05 - Cost Control

During July, Acres received an additional allocation of \$5,963,829, bringing the total funding to \$23,933,829. Funding allocations were sent to Acres' subcontractors. Additional funding will be required around the first of the year. Johnson & Higgins, Acres' insurance broker, has reviewed our subcontractors' insurance policies and confirmed they are in accordance with their contracts. Contract Amendment No. 1 was approved increasing the contract amount to \$23,933,829.

TASK 14 - ADF&G SUPPORT

ACRES ACTIVITIES

Work on this task continued routinely during the reporting period.

RE: Monthly Report, July 1981

Dear Dr. Hayden:

ADMINISTRATIVE SUPPORT

The July activities of the Administrative Support staff were varied and hectic during this, the busiest month of the field season.

Tom Trent and his assistant Larry Bartlett attended a Su Hydro Steering Committee meeting where among other topics, the ADF&G Procedures Manual was discussed. They also met with the Instream Flow Group chaired by Woody Trihey. Data reduction program needs were reviewed with the appropriate personnel with Tom outlining preliminary steps for the staff to follow. He also reviewed field operations in the company of the ADF&G Regional Commercial Fisheries Supervisor.

Larry was kept busy with internal coordination of Instream Flow committees and other project needs.

Kyle Watson worked mainly on budget audits and related office necessities.

Helen Dickson kept pace with the steady stream of correspondence and project typing.

Allen Bingham, Project Biometrician who started July 6, was kept busy setting up his computer equipment as it was delivered, attending meetings, recruiting for a programmer and data clerk, and reviewing data forms and reduction procedures with the project leaders.

Bob Dierck was on leave the latter half of July but spent the first half of the month performing maintenance on the projects equipment.

Dr. John Hayden

-2-

August 11, 1981

RESIDENT AND JUVENILE PROJECT

Aerial surveys for chinook salmon began July 15. The surveys continued, as weather permitted, into August with the results expected by about September 15. Survey conditions were generally marginal to poor this year in those streams colored with humic acids. Survey conditions in most alpine streams were considered to be very good, however.

One member of the RJ staff was assigned to work with the project biometrician to facilitate data reduction. Several refinements of the data forms were made as a result.

High water resulted in the loss of a yet undetermined amount of set gear. Precipitation fell just 0.05 inch short of the all time recorded record for July and sent the Susitna River and its tributaries surging over their banks. Extended flood stages made working conditions impossible in some cases and extremely hazardous in others.

The lower river reach was covered to the best of the crews ability considering the flood conditions during the latter half of the month. Stickleback again dominated the first survey period with 92% of the 6122 fish captured. Three age classes (adult, 1+ and 0+) were observed.

The catch of 1+ chinook salmon increased over the previous June survey. A size sample of these fish were collected and is illustrated in Table 6.

A total of 22 fish were tagged and released. They were 12 longnose sucker, 7 humped whitefish, 2 rainbow trout and 1 burbot.

Water levels fluctuated daily. Several of the staff gages had been damaged and most showed signs of silting up to 0.75 feet since their installation.

The catch of stickleback decreased dramatically during the second survey period on the lower reach (1st: 5622 - vs - 2nd 661). Catches of chinook salmon in the 1+ age class increased from 350 to 371 fish with the Little Willow Creek site producing 231 of these.

A single rainbow trout was the only fish tagged during the second period. Gillnets were not used as extensively this trip because of fouling by adult salmon.

The river was at flood stage during the second period of sampling.

One trip report covering the July 1-15 period is available for the next upstream section of river. This section was more severely affected by high flows than the lower reach. None the less, a total of 823 fish were captured.

Three spine stickleback continued to dominate the catch in this section of river. Seventeen chinook in the 0+ age class, 269 in the 1+ age class, 4 coho in the 0+ age class, 74 coho in the 1+ age class, 19 coho in the 2+ age class, 2 Dolly Varden, 3 rainbow trout, 4 burbot, 31 sculpin and 400 stickleback were captured. Six of the resident adults were tagged.

Dr. John Hayden

-3-

August 11, 1981

Constant rain in the Talkeetna area plagued the field crews assigned to that section as well and some sampling site locations had to be temporarily abandoned because of dangerous flood conditions and debris. The total catch for this section was 2 0+ chinook, 22 1+ chinook, 29 0+ coho, 191 1+ coho, 2 2+ coho, 7 rainbow trout, 6 Arctic Grayling, 1 Dolly Varden, 12 Longnose Sucker, 6 round whitefish, 1 humpback whitefish, 15 burbot, 13 sculpin and 685 stickleback.

Of the above fish, 10 burbot, 2 rainbow trout, 1 round whitefish and 3 longnose sucker were tagged and released. Numerous tagged adult sockeye salmon were sighted in this section as well.

Two trips are recorded on the Gold Creek section of river. These were plagued by high water and bears. High water coming out of Devil Canyon changed the channels at several sites and bears kept getting into food supplies in spite of precautions and deterrents.

In spite of problems encountered, the first period yielded 104 stickleback, 46 0+ chinook, 7 1+ chinook, 35 sculpin, 20 rainbow trout, 13 0+ chum fry, 10 longnose sucker, 9 burbot, 3 0+ coho, 5 1+ coho, 8 Arctic Grayling, 2 humpback whitefish, 2 round whitefish and 1 Dolly Varden. Seventeen of the resident adult fish were tagged and released.

The second period yielded 64 0+ chinook, 30 1+ chinook, 28 0+ coho, 14 1+ coho, 10 rainbow trout, 2 Arctic Grayling, 21 longnose sucker, 13 round whitefish, 7 humpback whitefish, 15 burbot, 15 sculpins, 25 stickleback and 3 pink salmon fry.

Five minnow traps were crushed by bears trying to eat the bait during this period.

The impoundment trip for this month was conducted between the 15th and 28th. Paul Suchanek wrote the trip narrative which describes the conditions encountered and I'll include it with this report.

ADULT ANADROMOUS

July was, as expected, a very fast-paced month for this section of the project. Much higher than expected catches and high water were major points of contention.

Flood conditions did not create as much havoc on the fishwheels and sonar counters as it did on gear used for RJ and AH data collection, but still, wheels were inoperative for up to 8 days with one wheel snapping its mooring cables and drifting 5 miles downstream where it came to rest in a log jam.

The sonar counters received only minor damage; the worst being one unit at Talkeetna having a 6 to 8 foot section of tube crushed by debris.

A preliminary summary of sonar counts are included with this report. The data suggests an exceptionally high escapement of sockeye and chum salmon while the other species are about average.

Dr. John Hayden

-4-

August 11, 1981

Fishwheel catches are also included and suggest that a higher than forecast interception occurred at Sunshine, Talkeetna and Curry.

The chinook salmon radio telemetry program is going well. Sixteen adult chinook, 4 at Talkeetna and 12 at Curry, were tagged and their movements monitored. A map of the river system is provided to aid discussion of their movements.

The confluence area near Talkeetna is a suspected milling area. The fish tagged at the Talkeetna site moved downstream and remained in the confluence area several days. One fish moved up the Talkeetna River after holding several days, another displayed up/downstream surges before moving up the Susitna River and the remaining two held in the confluence area up to two weeks before migrating up the Susitna River.

The fish tagged at the Curry site displayed less downstream movement after tagging. Eight of the 12 moved back upstream after tagging. Two remained downstream as of July 22. One held position near a small tributary and another apparently died from tagging stress.

Of those that moved upstream, some entered more than one tributary. One fish entered Portage Creek on July 7 or 8, dropped back into the Susitna by July 12 and entered Jack Creek between July 12 and 16. Another entered Portage Creek on the 7th or 8th, dropped back to the Susitna by the 12th and re-entered Portage Creek on the 16th.

Two fish were noted to be milling in Devil Canyon as far upstream as mile 152.

The limited sonar and radio telemetry observations suggest that fish did not move about much during the high water period.

Three two man crews were hired mid month and are currently sampling Susitna River mainstem and sloughs for spawning fish. The Gold Creek crew is also conducting tributary surveys between Talkeetna and Devil Canyon and set netting immediately below Devil Canyon upstream of Portage Creek confluence. To date, the survey crews have not collected any substantially new information. A complete report will be available next report period on their progress.

AQUATIC HABITAT AND INSTREAM FLOW PROJECT

Routine recording of habitat and instream flow measurements continued as AH personnel accompanied the RJ crews to the sampling sites as water conditions permitted. Flood conditions resulted in the loss of 4 thermographs and general wet weather resulted in the malfunction of several instruments. The thermographs will have to be replaced from the spares now on order and the instruments were shipped to the manufacturer for repair.

The project biometrician accompanied the project leader to the field to evaluate AH data collection procedures.

Dr. John Hayden

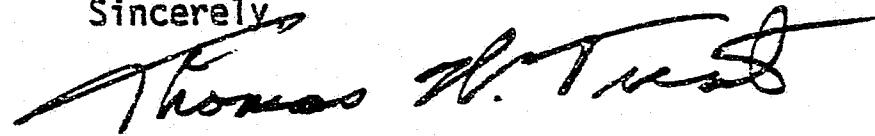

-5-

August 11, 1981

Instructions for collection of habitat data were given the recently hired AA survey teams. Survey teams will be collecting point specific habitat data at selected spawning redds as required by the procedures manual.

Collection of AH data parameters is reported to be progressing well barring some malfunction of the sophisticated equipment used for the collection and loss of other equipment.

FROM Paul Suchanek
Fisheries Biologist

SUBJECT Trip Report
Impoundment Area
7/15/81-7/28/81

The third monthly sampling trip in the Susitna Impoundment area took place from July 15 to July 28. The crew consisted of Joe Sautner, AH; and Paul Suchanek, Bob Marshall, and Mike Stratton, RJ. Christopher Estes, AH accompanied the crew from July 15-19. Dana Schmidt, TES accompanied the crew from July 21-25.

Set gear was fished in all 8 sampling streams where sites were available. Sally Lake was dropped from the sampling schedule. Intensive rod and reel sampling again took place in the streams sampled. On July 15, a crew of 3 flew to the mouth of the Tyone and fished with rod and reel for a short while. Only 1 grayling was tagged due to high water on the mainstem Susitna backing up water at the Tyone mouth and making fishing conditions poor. The crew then rafted down to the Oshetna River. Also during this trip the sampling period in the field was shortened by 3 days. The proposed rafting of V-canyon was aborted due to poor raft maneuverability and high water.

Fish captured on this trip (Table 1) included 867 grayling, 19 burbot, 7 longnose sucker, 1 round whitefish, and 9 cottid. About 43% of the grayling were caught in the study area.

Total fishing effort for all types of gear are listed in Table 2. About 98% of the grayling were caught by rod and reel in the study areas. Fishing success for rod and reel sampling was 8.3 grayling/hour. Six juvenile grayling and 9 cottid were captured in the minnow traps. Trot lines accounted for 18 burbot while 1 was caught by rod and reel. Gill nets were little used due to high water levels and accounted for 7 suckers, 1 round whitefish, and 2 grayling.

Total number of fish tagged on this sampling trip was 727 (Table 3). Of the fish tagged, about 99% are grayling. Cumulative totals of fish tagged are also listed in Table 3. Overall, grayling constitute 93% of the fish tagged thus far.

Grayling tag recoveries from the previous 2 trips totaled 99. Nearly all fish were recovered in the streams where they were tagged.

Adipose fins were clipped on fish tagged in the Oshetna River. No adipose fins were clipped on creeks lower in the drainage as these streams already have some fish in them with adipose fins clipped on previous trips.

Kevin Delaney

-2-

August 6, 1981

Once again grayling were found throughout the streams. A helicopter shuttle was used to sample upper areas of Tsusena, Kosina, and Deadman Creeks. On Deadman Creek, the area above the falls was sampled by rod and reel and found to have good populations of large grayling; 68 were tagged.

Water levels on the mainstem Susitna were very high throughout the sampling period and creek levels were also generally high. The clearwater rearing slough near Watana Creek, previously unconnected to the Susitna was now connected. This slough, which on the previous trip had many small grayling in it, now apparently was devoid of fish.

At the clearwater slough upstream from Jay Creek, seining produced a number of grayling and round whitefish fry from 30 to 100 cm in length. It also appeared to be an excellent rearing slough and was connected to the Susitna.

Clear water from Kosina Creek flowed into a slough which begins about one half mile down the Susitna River. We fished with rod and reel at the slough mouth and captured 45 grayling in 2.5 hours. Apparently fish from Kosina make use of the slough during high water periods as we had several recaptures from Kosina.

Several black bear were observed this trip along with a large number of moose. Five caribou, 4 bulls and a cow, were seen on a gravel bar between Kosina and Watana Creeks.

Helicopter time on this trip totaled about 5.0 hours with the 205 and 3.5 hours with the 206.

cc: L. Bartlett

Table 6. Mean lengths for king salmon I+ in the Susitna River and its major tributaries from Little Willow Creek downstream to Alexander Creek, July 1 to 10, 1981.
